

# The Work Number

## Implementation Overview

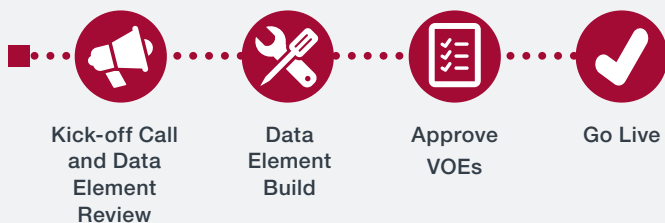

Even with thousands of employers using The Work Number®, we, at Equifax, understand that all organizations are different. That's why the implementation process is designed with you in mind. A dedicated Equifax Implementation Manager and Business Process Consultant are assigned to each project to assist in the development of a custom data transformation and provide guidance throughout the implementation lifecycle.

During the implementation process for The Work Number, Equifax is here as your partner each step of the way. We use a series of sprints, designed to help you receive value from the service as quickly as possible, while enabling your employees with improved access to credit and benefits sooner.

### Sample Implementation Timeline

#### SPRINT 1

##### Demographic Data Build — Fulfill VOE Inquiries

Employment data starts with the demographic elements required to fulfill Verification of Employment (VOE) inquiries, which account for nearly half of all verification requests.

#### SPRINT 2

##### Income Data Build — Fulfill VOI and SSV Inquiries

Income and benefit data add more detailed information to support Income (VOI) and Social Service Verifications (SSV) for verifiers requiring income as part of their decisioning processes.

#### Tips for a successful implementation include:

- Identify resources prior to project kick-off call
- Request file build resource from payroll provider
- Participate in weekly status calls
- Encourage continued engagement throughout implementation process
