Supplier Risk Solution

Assess new vendors and suppliers quickly to help ensure continuity of business and avoid potential supply chain disruptions

In today's expanding marketplace the competition is fierce, and it's ever more important to ensure you're maintaining the right supplier relationships. Unfortunately, only 6% of companies report full visibility of their supply chain¹, which can create significant supply chain risk for businesses. Considering the ongoing challenges within global and local supply chains, having greater visibility into the potential risks brought by all your vendors and suppliers is no longer a nice to have.

Identify the right vendors through effective analysis

As disruptions increase, organizations need to modernize the assessment and monitoring of their suppliers and their supply chain. Leveraging the right technology to instantly assess multiple types of risk within your supplier network can improve the effectiveness of onboarding new suppliers, while simultaneously flagging changes in the risk profile of existing suppliers.

Powered by

Supply chain and procurement

- Reduce the risk of supply chain disruptions by finding reliable vendors and suppliers
- Build and maintain relationships with the right partners across markets
- Increase efficiency and speed of procurement and onboarding new vendors without increasing risk

Supplier risk and compliance management

- Quickly identify risks while onboarding new suppliers and prevent issues with existing vendors
- Help maintain and compliance policies across the business
- Collaborate more effectively within the organization when assessing new suppliers
- Optimize processes and reduce manual work with a "manage by exception" approach

Reduce supply chain risk through proactive, continuous monitoring

Even beyond the standard financial risks, there are numerous underlying, inherent conditions that impact supply chain risk. The Supplier Risk Solution™, powered by Interos, helps to distill these supply chain risks into distinct categories that contain dozens of metrics to capture the hidden risk based on a range of data sources and modeling.

Financial risk

Assess the probability of financial loss with a specific emphasis on solvency and the probability of default or bankruptcy.

Cyber risk

Assess the probability of data theft, disruption, or manipulation, based on both a firm's security assessment as well as the regulatory and risk environment of the country in which it is located.

Environmental, social and governance (ESG)

Integrate the probability of environmental, social, or governance issues that cause reputation or financial exposure or loss.

Restrictions

Detail whether a company is on one or more of the United States Government's regulatory lists, as well as the European Union sanctions list.

Geopolitical risk

Assess the probability of political instability within the country a firm is located, based on both a recent history of instability and violence, and socio-political processes and conditions.

Operational risk

Assess the probability of catastrophic events occurring, such as man-made and natural disasters, as well as a country's capacity to withstand them.

88% of businesses say visibility into their **global supply chain is more important now** than two years ago.²

Interos is the operational resilience company — reinventing how companies manage their supply chains and business relationships — through a breakthrough SaaS platform that uses artificial intelligence to model and transform the ecosystems of complex businesses into a living global map, down to any single supplier, anywhere.
