

I-9 Audit and Remediation

Gain confidence in your I-9s

You get it. Paper I-9s are risky. With 60% to 80% of paper I-9s missing, incomplete, or having errors* you know there is likely risk lurking in your I-9 database. But audits can be time consuming and once you uncover the problems you still have to fix them.

We got it. Workforce Solutions from Equifax can help streamline the process, to efficiently identify potential issues with your I-9s and give you tools to help simplify your corrections.

I-9 Audit and Remediation can help you...

Find your I-9 issues

The automated inspection process provides a comprehensive review of some or all of your I-9s for problems. The service recognizes issues easily missed with manual document reviews. Combining I-9 Audit and Remediation with The Work Number® database helps identify missing I-9s and removes outdated forms that have met retention requirements.

Correct your I-9 errors

The risk dashboard helps you focus your efforts by sorting issues and comparing to average fine rates, so you can see which I-9s might pose the greatest risk. Smart tools make corrections easier for you and your employees with guided prompts for Section 1, Section 2 and Section 3. Notification options help you more easily assign corrections to the right employees. Email alerts can be sent to employees to make corrections to Section 1. And, Section 2 completers can be assigned specific user roles, which limits their access to only the work items for which they are responsible.

Prepare for an I-9 audit

The detailed audit trail keeps a record of new I-9s and any changes to existing I-9s. You'll be better prepared to quickly respond to an audit with search, view, and print tools while structured storage helps facilitate audits and administration at both corporate and location levels.
